| | AGGREGATING DATA USING GROUP FUNCTIONS |
|------------|--|
| Ex.No.: 10 | |

Determine the validity of the following three statements. Circle either True or False.

1. Group functions work across many rows to produce one result per group.

True/False

TRUE

2. Group functions include nulls in calculations. True/False

FALSE

3. The WHERE clause restricts rows prior to inclusion in a group calculation. True/False

TRUE

The HR department needs the following reports:

4. Find the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number

SELECT ROUND(MAX(salary)) AS "Maximum",ROUND(MIN(salary)) AS "Minimum", ROUND(SUM(salary)) AS "Sum", ROUND(AVG(salary)) AS "Average"FROM employees;

| Maximum | Minimum | Sum | Average |
|---------|---------|--------|---------|
| 16000 | 4600 | 158500 | 7925 |

5. Modify the above query to display the minimum, maximum, sum, and average salary for each job type.

SELECT job id, ROUND(MAX(salary)) AS "Maximum",

ROUND(MIN(salary)) AS "Minimum", ROUND(SUM(salary)) AS "Sum", ROUND(AVG(salary)) AS "Average" FROM employees GROUP BY job id;

| JOB_ID | Maximum | Minimum | Sum | Average |
|------------|---------|---------|-------|---------|
| IT_PROG | 16000 | 6000 | 51600 | 8600 |
| AC_ACCOUNT | 15000 | 15000 | 15000 | 15000 |
| AC_MGR | 7100 | 7100 | 7100 | 7100 |
| SA_MAN | 7200 | 7200 | 7200 | 7200 |
| SA_REP | 13500 | 5500 | 30800 | 7700 |
| HR_REP | 12500 | 4600 | 35300 | 7060 |
| ST_CLERK | 6200 | 5300 | 11500 | 5750 |

6. Write a query to display the number of people with the same job. Generalize the query so that the user in the HR department is prompted for a job title.

SELECT COUNT(*) AS "Number of People" FROM employees WHERE job_id = '&job_title';

7. Determine the number of managers without listing them. Label the column Number of Managers. *Hint: Use the MANAGER ID column to determine the number of managers*.

SELECT COUNT(DISTINCT manager_id) AS "Number of Managers"FROM employees WHERE manager_id IS NOT NULL;

8. Find the difference between the highest and lowest salaries. Label the column DIFFERENCE.

SELECT (MAX(salary) - MIN(salary)) AS "DIFFERENCE" FROM employees;

9. Create a report to display the manager number and the salary of the lowest-paid employee for that manager. Exclude anyone whose manager is not known. Exclude any groups where the minimum salary is \$6,000 or less. Sort the output in descending order of salary.

SELECT manager_id, MIN(salary) AS "Lowest Salary" FROM employees WHERE manager_id IS NOT NULL GROUP BY manager_id HAVING MIN(salary) > 6000 ORDER BY MIN(salary) DESC;

| MANAGER_ID | Lowest Salary |
|------------|---------------|
| 103 | 13500 |
| 101 | 12500 |

10. Create a query to display the total number of employees and, of that total, the number of employees hired in 1995, 1996, 1997, and 1998. Create appropriate column headings.

SELECT

COUNT(*) AS "Total Employees",

SUM(CASE WHEN TO_CHAR(hire_date, 'YYYY') = '1995' THEN 1 ELSE 0 END) AS "Hired in 1995",

SUM(CASE WHEN TO_CHAR(hire_date, 'YYYY') = '1996' THEN 1 ELSE 0 END) AS "Hired in 1996",

SUM(CASE WHEN TO_CHAR(hire_date, 'YYYY') = '1997' THEN 1 ELSE 0 END) AS "Hired in 1997",

SUM(CASE WHEN TO_CHAR(hire_date, 'YYYY') = '1998' THEN 1 ELSE 0 END) AS "Hired in 1998" FROM employees;

| Total Employees | Hired in 1995 | Hired in 1996 | Hired in 1997 | Hired in 1998 |
|-----------------|---------------|---------------|---------------|---------------|
| 20 | 1 | 1 | 2 | 3 |

11. Create a matrix query to display the job, the salary for that job based on department number, and the total salary for that job, for departments 20, 50, 80, and 90, giving each column an appropriate heading.

SELECT job id,

SUM(CASE WHEN department_id = 20 THEN salary ELSE 0 END) AS "Dept 20", SUM(CASE WHEN department_id = 50 THEN salary ELSE 0 END) AS "Dept 50", SUM(CASE WHEN department_id = 80 THEN salary ELSE 0 END) AS "Dept 80", SUM(CASE WHEN department_id = 90 THEN salary ELSE 0 END) AS "Dept 90", SUM(salary) AS "Total Salary"

FROM employees WHERE department id IN (20, 50, 80, 90) GROUP BY job id;

| JOB_ID | Dept 20 | Dept 50 | Dept 80 | Dept 90 | Total Salary |
|------------|---------|---------|---------|---------|--------------|
| IT_PROG | 0 | 6000 | 0 | 0 | 6000 |
| AC_ACCOUNT | 15000 | 0 | 0 | 0 | 15000 |
| AC_MGR | 0 | 7100 | 0 | 0 | 7100 |
| SA_MAN | 0 | 7200 | 0 | 0 | 7200 |
| SA_REP | 0 | 0 | 13500 | 0 | 13500 |
| HR_REP | 4600 | 0 | 0 | 0 | 4600 |

12. Write a query to display each department's name, location, number of employees, and the average salary for all the employees in that department. Label the column nameLocation, Number of people, and salary respectively. Round the average salary to two decimal places.

SELECT d.department_name AS "Department Name", l.city AS "Location", COUNT(e.employee_id) AS "Number of People", ROUND(AVG(e.salary), 2) AS "Average Salary" FROM employees e JOIN departments d ON e.department_id = d.department_id JOIN locations l ON d.location id = l.location id GROUP BY d.department name, l.city;

| Department Name | Location | Number of People | Average Salary |
|------------------|---------------|------------------|----------------|
| IT | London | 3 | 6766.67 |
| ST_CLERK | Dubai | 1 | 13500 |
| ST_CLERK | Sydney | 1 | 5300 |
| Customer Service | Mumbai | 1 | 12500 |
| Admin | New York | 2 | 11100 |
| ST_CLERK | San Francisco | 2 | 9800 |
